FDSN StationXML-SEED Converter - Bug #240

Fails silently if server returns 204

05/15/2013 04:57 PM - Adam Clark

Description

Running with two fdsn-station URLs; the first one has no data and returns a 204, the second one is valid and returns data:

```
$ ls -l test.dataless
-rw-r--r-- 1 www daemon 0 May 15 16:53 test.dataless
```

When the first one fails it aborts the whole process, so other URLs aren't handled.

Adding &nodata=404 fixes the problem, but since this isn't the default it seems easy to run into trouble:

```
$ ls -l test.dataless
-rw-r--r-- 1 www daemon 32768 May 15 16:52 test.dataless
```

History

#1 - 06/05/2013 10:31 AM - Yazan Suleiman
- Status changed from New to Resolved

#2 - 01/23/2015 10:16 AM - Robert Weekly
- Resolution set to Fixed
- Status changed from Resolved to Closed

A warning is now displayed when a 204 is encountered and the converter processes the valid request after skipping the invalid request.

Ticket closed.
